Art Unit: 1762

The following is an examiner's statement of reasons for allowance:

It is well known in the art to utilize ultraviolet radiation to react a organic precursor to deposit a film as noted by Yamazaki (6,130,118) and Usuki (5,914,151). Arkles (6,586,056) also teaches the conventionality of forming a silicon-based film by using an ultraviolet source to react silazanes in a vacuum environment. However, the prior art references do not teach or suggest the using a UV source having a specific wavelength of about 172nm at an energy of 7.2 eV to break Si-N bonds in the organosilazane to deposit a film at a substrate temperature of less than 100°C.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
